
Nunes and Maharajh Customs Brokers

Category: Application Development

Development Status: Completed

Project Date: August 2006

Details: When this established Customs Broker firm grew tired of the old typewriter and calculator system, they called in Rizon to develop a complete Customs Broker information system.

Rizon converted their paper-based system into e-forms, and developed an extensive database back-end to store their Customs and Excise information. Coupled with a document manager, and a billing application, this system increased the efficiency of processing Customs documents by over 500%.
